Subject: 1.6.2017 update
Date: Friday, January 6, 2017 5:50:08 PM

Today's activity consisted of discussion about disposing of the couches and mattresses. We decided to table the issue until health department could give input. From Chip Orton with the City of Amarillo the health department is good with disposal but wants to contact the father for legal concerns. The day ended with word that Chip Orton was working to contact the father. SWS stirred the bucket of treatment solution three times today. Morning, lunch, and evening. START conducted monitoring inside and had readings of <0.1 ppm for phosphine. Amarillo Police Department showed up at five o'clock with more specific information about the location of piles of Weevil-Cide. Based on this information SWS went back to the location (under trailer) and took photos and recorded a video of the area. In an area where the police department indicated where a pile had been picked up by the home owner they could see no visual evidence. The police also stated that the home owner covered what wasn't pick up with dirt. SWS used a shovel to scraped down three to four inches to look for potential Weevil-Cide. No visual evidence of Weevil-Cide was detected. START was along with SWS and took reading where the pile had been removed on Wednesday and recorded a reading of 0.3 ppm for phosphine. The Police Department is wanting Mathew Shockey and Gary Smith to complete affidavits describing what they found and removed from under the trailer on Wednesday.
